

EDA and clicks fit independently — augmented moving-target cohort: $\tau_{\text{EDA}} = 4.90$ s, $\tau_{\text{click}} = 3.90$ s ($\Delta = -1.00$ s)

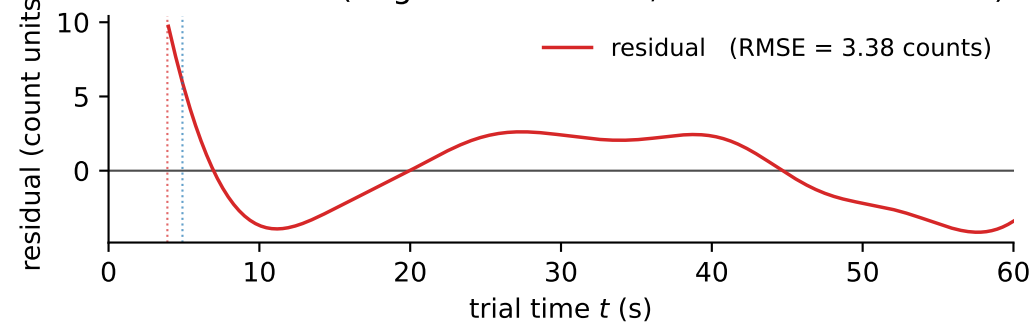

Task EDA on trial horizon ($x \in [0, 1]$, rate Hz) — augmented moving-target cohort (avatar + shadow + rescued none, $N = 948$)

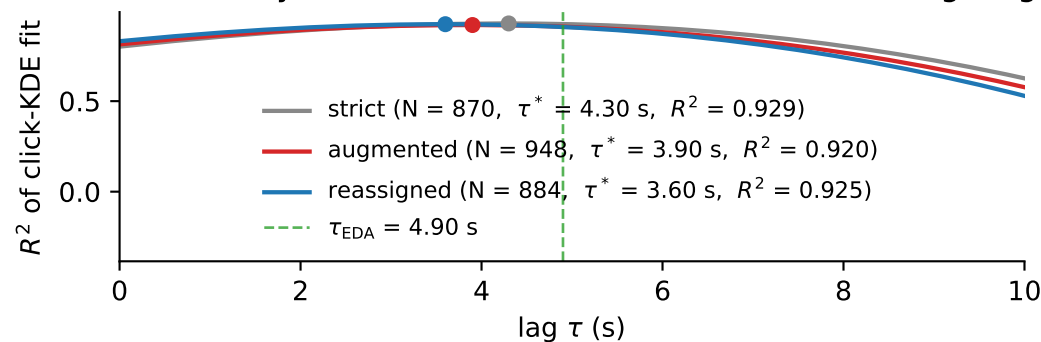

EDA residual (fit window $t \geq 4.90$ s)

Click residual (augmented cohort, fit window $t \geq 3.90$ s)

Cohort sensitivity: $R^2(\tau)$ for three definitions of the moving-target set

Matlab KDE by cohort (reflection-corrected)
